

**DRIVING CHANGE TO DECENTRALIZED ENERGY**

UNIVERSAL KRAFT | 2023

# UNIVERSAL KRAFT

For 20 years, renewable energy solutions have been the main focus of Universal Group with worldwide developments through, what today has become, Universal Kraft.

We approached the market from a consumer point of view, coming from energy efficiency to the production side. Our solutions range from small scale hydro, wind, solar, to waste-to-energy and water saving technologies, as well as energy storage solutions, green hydrogen and green ammonia.

Being a developer of large-scale ground based power projects, we have a vision to start from standardized midsize and scalable production units, to be able to optimize grid constraints and power output, also with a focus on off grid communities.

# UNIVERSAL KRAFT

With an international team of over 50 experienced professionals in engineering, development, EPC, O&M, off-take, financing and M&A, we can easily adapt to any challenge.

Universal Kraft is continuously innovating and learning new ways to approach the market. This multidisciplinary attitude gives us tools to venture in other sectors in a similar way.

From a dual Swedish/Iberian starting point, Universal Kraft currently operates in Portugal, Spain, Sweden, United Kingdom, Canada and Hong Kong.

# LEADING PORTFOLIO

Universal Kraft, together with its partners, has a solid experience in developing and engineering, now also moving into construction and management, of renewable energy infrastructures.

This experience, allow us to manage any kind of project, from small to large scale, with innovative technologies in any part of the world.

## LEADING PORTFOLIO SWEDEN

Universal Kraft is one of the larger solar developers in the Nordics, with more than 100 designed and engineered projects totaling 720 MW in Sweden. We have significant portfolio in the south of the country, but are also expanding to the north where the energy production is more challenging. We expect to grow our Swedish portfolio even more, with more than 1400 HA in pipeline.

## OUR GROUP COMPANIES

[Universal H2](#) specializes in green hydrogen and ammonia energy solutions. Committed to a sustainable, reliable, and affordable energy system with a rapid market growth, UH2 works on solutions for both green power production, distribution and storage. Able to provide the full project needs, the company strives to add value through rapid acquisitions in strategic locations, implementing ongoing technology improvements and innovative solutions, as well as creating bankable value chains.

[Island Power Solutions](#) offers renewable energy solutions for islands. The company's goal is to find the best alternatives of green energy production and storage, replacing fossil fuel energy systems. Aiming to help islands reach 100% clean power production and consumption, IPS works closely with both stakeholders and local communities, focusing on a long-term sustainable business model, combining all the disciplines within the Group to create tailor-made, yet based on standardized technology, circular solutions.

[Solar Parking](#) specializes in transforming conventional parking spaces into sustainable and green energy producing units. Solar Parking develops different concepts for cost efficient, sustainable, flexible and price competitive solar carport installations. These concepts are easily installed, flexible and adaptable to different locations and conditions.

[Energy Air Storage](#) is the spin-off company dedicated to air storage solutions. Through advanced technologies, the company develops air engines, mainly for use in the automotive market. Together with its partners, EAS is developing the application for large scale usage for energy storage and in combination with solar and wind power.

[Universal Collect](#) is the non-profit organization of the Group. With the project [iCollect](#), the organization aims to generate real social impact using its competencies to reduce the use of plastic cross the globe, reducing future pollution. The PacMan fleet, a global initiative driven by iCollect, is a specific solution to address this challenge
